THE STEEL.

During the winter of all the New England States and in parts of the Northwest Territory the steel knife has been successfully used in the manufacture of the steel plate for the Navy. It is not only possible, but has been proved superior to the best of the old-fashioned knives in the effect on the steel. The steel knife is much more durable than the old-fashioned kind, and the blades are not likely to become dull or lose their edge easily.

The steel knife is not only superior in durability, but it is also more practical and convenient in use. It is easier to sharpen and maintain than the old-fashioned kind. The blades are not likely to become dull or lose their edge easily, and the handle is more comfortable to hold and use.
